

Mitchell Regulatory Reporting Solutions™

INCREASE REPORTING ACCURACY AND EFFICIENCY.

Implementing an Electronic Data Interchange (EDI) solution for your injury reporting, and Centers for Medicare & Medicaid Services (CMS) is a requirement for claims administrators these days. There's increasing pressure on two fronts—1) today's regulatory compliance standards and 2) your organization's operational efficiency goals. Mitchell **Regulatory Reporting Solutions™** is uniquely designed to be an empowering, integral solution set of every claims administrator's EDI strategy.

WorkComp.NET

WorkComp.NET™ is an EDI solution that provides web-based reporting compliance for FROI/SROI and CMS. Its automation features empower you to:

- Lower claims reporting costs
- Decrease manual processing and data entry
- Meet state EDI reporting requirements
- Increase acceptance rates, reporting accuracy and efficiency
- Integrate claims and risk management applications
- Reduce potential for fines and penalties

First Reports of Injury (FROI) and Subsequent Reports of Injury (SROI): Eliminate manual data entry by exporting FROI/SROI data from your claims management system via SFTP. Export one file format using the IAIABC Release 3 or Mitchell generic XML for reporting all claims, regardless of state reporting R1, 2, or 3 requirements. Webservices is also available in the XML format to allow immediate edit notification from Mitchell's system.

AUTOTRIGGERS

Together with WorkComp.NET, **AutoTriggers** can dramatically reduce human intervention in normal EDI compliance processes—helping reduce the potential of fines and penalties and IT expenses required for EDI development. Automatically export your raw claims data, and AutoTriggers takes care of all the steps required to send the proper FROI/SROI report to the state—at the right time, in right sequence, with the correct Maintenance Type Code (MTC)—and right format.

BUSINESS EDIT SERVICE (BES)

Business Edit Service provides the option of running state-specific mandatory, conditional edits and IAIABC business edits on a FROI/SROI in a Mitchell-hosted ASP. You will know the state requirements prior to submission, therefore preventing errors on the front-end and dramatically improving your reporting efficiency and acceptance rates.
